Introduction

Internal trade survey of annually quarter is defined as a set of economic data and statistics that used in a short term in measuring trade sector performance to evaluate sector growth as well as know the strength or weakness of the sector. Furthermore, Internal trade activity is one of essential economic activities since it contributes to domestic product and labor force exactly like the retail activity which is considered as a link between producers and consumers. The data of this survey has been collected through field visits, as researchers visited the establishments and completed data according to the survey form items. Also, all large establishments have been covered in this survey. However, a representative sample has been used for small, very small, and medium establishments. Moreover, the trade indicators survey is a periodic study that focuses on the properties and components of institutions involved in vehicle sales and repair activities, wholesale and retail trade. Internal trade indicators survey of annually quarter is significant as it provides short-term indicators on the number of employees by gender and nationality, employees' compensations that need to be paid, operating expenses, in addition to operating revenues (sales) that include electronic sales. In conclusion, GASTAT would like to express its deep thanks to all those who participated in this survey, particularly the establishments that work in the internal trade sector for their cooperation in providing GASTAT with required statistical data. It is worth mentioning that GASTAT hopes that all planners and researchers of this field would benefit from the information mentioned in this report. Therefore, please provide us with any comments that might help in improving this report in the future.

General Authority for Statistics

Department of Industry and Business Statistics

2018

Survey key features

First: Survey objectives

1. providing updated statistical data to help decision makers reduce unemployment and increase employment in the private sector in the internal trade activity.
2. Knowing the volume of internal trade activity (wholesale and retail) in a short time.
3. Measuring internal trade activity growth rates as well as quarterly fluctuations.
4. knowing the volume of electronic sales of net sales in the market.

5. Recognizing the average number of employees, employees'

compensations, operating expenses, operating revenues (sales), electronic sales and the change of fixed assets in internal trade sector.

Second: Benefits

The internal trade survey data supports decision makers and planners in Saudi labor market.

The survey

indicators help in developing programs and plans that aim at increasing the job opportunities and

decrease unemployment. Regional and international organizations, researchers, academics, and those

who are interested in labor market may get benefited from the outputs of this survey by using them in

their reports, studies, and research.

Third: Survey coverage

The survey covers establishments involved in the sale and repair activity of motor vehicles and motorcycles. Moreover, it covers wholesale and retail trade establishments excluding motor vehicles and motorcycles according to ISIC4.

2018

Fourth: Survey sample:

A stratified random sample, which includes all internal trade activities at the level of the fourth limit according to (ISIC4), was selected. It consists of (11,300) establishments distributed on (13) administrative regions.

Fifth: Training

An integrated training program was held for all survey participants including employees and collaborators. The training schedule of the program aims at identifying survey objectives, data collection method, and how to deal with establishments. It also answers all expected questions through special lectures with a detailed explanations.

2018

General definitions and concepts

1-Institution

It is an economic unit of business with a legal entity that has a fixed position in which a certain economic activity is carried out, owned by a person, a group of persons, a company, a semi-governmental sector or an enterprise. Additionally, it is the smallest economic unit that can have data on workers and their compensation, as well as expenditure, revenues and capital formation.

2-Economic activity

What is performed or provided by the institution, work or services to achieve a return. It should be noted that institutions sometimes do not achieve a return as in the case of charities that rely on donations.

3-Workers

All individuals (Saudis and non-Saudis) who are already working whether paid or unpaid work, and the owners of the institutions, their families or their employees, whether they work full time or part thereof, whether they are permanent or temporary male or female. Regardless of whether their wages are paid on a daily, weekly or monthly basis, including partners and members of joint stock companies, heads of directors and members of the boards of directors, as well as employees with paid leave.

2018

4-Compensations of employees

All payable amounts that should be paid periodically by the institution to its employees during the year including wages and salaries for regular working hours and fixed bonuses, as well as all types of benefits and allowances such as housing and social insurance

5- Operating expenses

All the institutions' expenses as a result of its economic activity, whether it was purchased in the same year or from purchases made in previous years.

6- Operating revenues (Sales)

The sales of the goods that purchased for the purpose of selling them in the same condition, for which purchases were made for these goods, whether the sales were for the main activity (wholesale or retail), or were for the secondary activity (wholesale or retail), and it also includes cash revenues earned as a result of the maintenance and repair of motor vehicles or other minor activities performed by the establishments.

7-Change in fixed assets

It is the identifying of fixed assets (holdings) and changes in the form of purchased additions or exclusions.

8- Value of Electronic sales

All sales are realized as a result of an established practice of electronic sales, whether directly or through an intermediary.

2018

Methodology of the survey

Search for needs

A workshop was held for the survey at GASTAT with the participation of a number of officials of the Ministry of Commerce and Investment, Small and Medium Enterprises General Authority, Council of Saudi Chambers, Job Creation Commission and businessmen of the private sector, in order to determine the requirement of those entities to provide the required data and to consider their opinions before the implementation of the survey.

Survey form design

The survey form included geographic data which are locational data to determine the location of the establishment. It also included economic data such as an accurate description of the economic establishment's activity, data on the number of employees and their compensation, data on expenditure and sales (revenues), change in fixed assets, as well as sales through the Internet.

Sample selection

The optimal size of the main sample was determined to meet the survey objectives at the Kingdom level and administrative regions, the sampling units were then withdrawn to the main sample, including the counting areas distributed to all the administrative regions. Prior to the withdrawal of the primary sampling units (enumeration areas) of the main sample, small enumeration areas or located in remote areas were integrated in order to replace them with similar counting areas to ensure proper representation for those classes and to obtain accurate results and estimates for all classes.

Data collection method

The survey data collection process is conducted by using personal interview method by qualified researchers under the direct supervision of GASTAT staff.

2018

Data collection tools

Data collection is done on the field through the electronic survey form by using the tablet designed for this purpose, which contains the data of small and very small enterprises as well as the paper survey form, which is delivered to large and medium enterprises. Then data are entered by using tablets, and also by using special links for self-fulfillment by the enterprises.

Upload and archive data and metadata collected on databases

It is done by using field researchers in different regions of the Kingdom for the synchronization feature available on tablets, the survey data are transferred directly to the database at the headquarter of the Authority to be stored for review and processing.

Evaluation and data quality

The main lines of data quality application are as follows:

- o Development and preparation of various software to examine the data and ensure its accuracy and validity.
- o Ensure that the researcher arrives at the desired site and complies with the time of the survey.
- o Frequent periodic visits are made by a team of specialists at the Authority to every city included in the survey according to specific timetable.
- o The quality sample is automatically withdrawn at the city and researcher level.
- o Special follow-up from quality monitors during field work also after the completion of the survey.
- o Consider the feedback and suggestions received from clients.
- o Evaluate the work periodically and follow up the international updates in this regard.
- o Make the necessary procedures and steps to improve data quality.
